

HGH—Human Growth Hormone For Women

Women tend to be more nervous about HRT—hormone replacement therapy—than men. That's because for too many years, the medical profession found it easier to prescribe estrogen-replacement than help women find healthy ways to deal with hormone fluctuations.

But HGH and hCG . . . the anti-aging HRT . . .

brings you different hormones—**Human Growth Hormone (HGH) and Human Chorionic**

Gonadotropin (hCG). HGH is a hormone you had as a child. But once you reached adult height, it slowed down—way down. And the

HGH you take as part of an anti-aging therapy won't make you taller. It just makes you feel younger and helps revitalize cells in every part of your body.

hCG is a hormone produced by pregnant women. Just like hCG helps produce a healthy baby, it can work wonders on you. It boosts natural production of female hormones. And targets stored fat, tightens sagging skin, and halts muscle loss. The list of improvements you'll see with a combination of HGH and hCG seems unbelievable:

- Your skin will look so much better . . . wrinkles disappear and you get back the elasticity, skin texture, and glow that you had 10 or 20 years ago.
- Your hair will get back its youthful shine and bounce.
- Your weight will decrease . . . not by losing muscle, but by getting rid of body fat. If you've ever battled the bulge, you may be angry to learn that research discovering the link between weight loss and hCG has been around for decades.
- Your sex life will improve. You'll be more interested . . . and find much more satisfaction. It doesn't start right away, but by the time you've been using HGH and

hCG for 4- to 6-weeks, you'll find that you're much happier—and more active—in bed.

- Your immune system gets a boost from the combination of HGH and hCG. You'll catch fewer colds, small injuries will heal quickly, and if you've had a nagging injury, you'll wake up one morning and realize it no longer bothers you.
- Your menstrual cycle regulates itself. And if you've gone through menopause, you'll discover the return of vitality you thought was gone forever.
- Your psychological health will improve. In part this will happen because you feel better physically, but HGH combined with hCG gives you more energy as it helps stabilize moods, promotes self-esteem, and gives you an improved attitude toward life.
- And we almost forgot to tell you . . . that your memory will improve.

What will your anti-aging HRT program include?

After a blood test and consultation with a physician, you'll start on a personalized program. But we can tell you that an HGH-hCG combination works very well for most women. Typically you will start with a 4- to 6-week course of HGH. You may not feel much different during this time. But when you add in the hCG, you'll start feeling better, looking better, and enjoying life much more.
